

**Indications:**

- Acute and chronic diarrhea in puppies
- Gastritis, enteritis, colitis
- Maldigestion, malabsorption
- Bacterial overgrowth
- Convalescence
- To improve body condition score in thin puppies

**Nutritional Differences:****Digestive Support:**

Helps to maintain the balance of gastrointestinal microflora and intestinal mucosa integrity

**High Energy:**

High energy density responds to the growth requirements of puppies while reducing the amount of food given per meal

**Optimal Growth:**

Appropriate levels of fat, calories, calcium, and phosphorus meet the requirements of growing puppies

**Easy Rehydration:**

Kibbles rehydrate easily in warm water to increase palatability and facilitate food intake

**Contraindications:**

- Pancreatitis
- Hyperlipidemia
- Lymphangiectasia

**Additional Differences:**

- Eicosapentaenoic and docosahexaenoic acids help nourish the digestive system and support optimal learning development in puppies
- A precise blend of antioxidants helps support a healthy immune system
- Enriched with fructooligosaccharides (FOS), hydrolyzed yeast, and zeolite (sodium silico aluminate) to help optimize intestinal health
- Highly digestible ingredients compensate for decreased intestinal enzymatic activity ensuring optimal intake of nutrients

**Notes:**

- In cases of acute disease, regeneration of the intestinal villi requires nutritional management to last for at least three weeks
- In order to optimize digestive function, the recommended daily intake should be divided into several small meals

**Feeding Recommendations for Canine Growth**
